HUBER Technology IFAT exhibition in Munich a tremendous success!

22.06.2016

HUBER made a big splash with an exhibit of nearly 12,000 square feet showing a large selection of their technology portfolio at IFAT in Munich.

The conference provided an opportunity to show both newly developed machines along with key advancements on most of the processes offered by HUBER Technology.

The very large number of visitors, the numerous contacts and the many constructive discussions during the fair week is a confirmation of our work to this point and has provided motivation for the future. HUBER Technology comes away with an inspiration to continue envisioning and creating innovative solutions in the areas of water supply, wastewater treatment, sludge treatment and energy efficiency.
